Sienna X Spray Tanning

Delivering the same results as spending 10 days in the sun, a spray tan can help you look and feel great without the harmful effects of the sun's rays. Suitable for any occasion all year round, you can choose from a healthy glow or opt for a deeper tan. Sienna X offers a variety of shades which enables me to customise your ideal tan. Its tanning solution contains natural, organic ingredients including Vitamins A & E, aloe vera and avocado. These ingredients are expertly blended into a unique moisturising formulation which delivers a natural and flawless, streak free tan lasting 5-7 days.

Full body spray tan – 24-48 hours before your spray tan, you will need to prepare by removing unwanted hair and exfoliating. Detailed instructions of how to fully prepare will be given prior to your appointment.

After Your Tan

Your tan will take around 8 hours to develop, meaning you will need to avoid excessive exercise, perspiring or getting wet during this development time.

After this time, it would've developed to a deeper tone than the final colour, which appears after you shower.

Usually my clients are sprayed at the end of the day or an evening, enabling their tan to develop whilst they sleep.

In the morning, you can shower to remove any excess colour, revealing a realistic and even tan.

Ensure you moisturise daily, I recommend Sienna X radiance body balm, this will prolong your tan and keep skin nourished.

Start to exfoliate four days after your tan using Sienna X polishing body scrub to encourage even fading.

Waxing

Fast and effective temporary hair removal lasting 4-6 weeks. I use a luscious gel wax enriched with aloe vera and cucumber to hydrate, soothe and cool. It's unique formula allows for a super thin application providing you with a treatment with minimal discomfort.
